

How to use Smart Mate Remote

1. **OTTO MODE:** With this mode, the fan automatically adjusts its speed according to the room temperature and humidity
2. **BREEZE MODE:** The fan speed cyclically increases and decreases to create an outdoor breeze-like effect in your room
3. **TURBO MODE:** When it's too hot, press this to increase the fan speed beyond the maximum limit
4. **INCREASE:** Use this to increase the fan speed
5. **DECREASE:** Use this to decrease the fan speed
6. Fan On/Off.
7. Mosquito Repellant On/Off

**Point 7 as optional and applicable only for "Shield" Model

Smart Shield (Mosquito Repellant)

- We can use this function without turning on the fan.
- The Mosquito Repellant effectiveness will be deviated depending on the customer's environment and distance.
- Testing carried out as per internal test standard with blood starved female mosquitoes, *Aedes aegypti* (4 - 5 days old) and mean repellency observed to be 65% in the experiments where the control preceded the treatment (MR ON) and repellency dropped to 25% when the treatment preceded the control (MR OFF)
- The temperature and RH during the experiment found to be in the range of 27-28°C and 70-76%

Very Important Warning:

Regulator should be Bypassed, otherwise fan performance can not be guaranteed

DISCLAIMER:

- **IMPORTANT:** Long term effect not tested and mosquitoes may become resistant. Mosquito species used in the test may differ from the mosquito species of your region.
- This product is one of the ways to manage mosquitoes and not intended to replace other protective devices against mosquitoes.
